

Bone Chillin'! Orthopedic Reductions and Regional Blocks

MO-16 / 1 Hour

Faculty: Gregory W. Hendey, MD, FACEP

Monday, October 8 / 12:30 PM - 1:20 PM

Would you want your loved one to wait in pain for that x-ray? Haven't you always wanted to possess new and better ways to reduce pain in your patients with orthopedic injuries as they wait for x-ray or during reduction/relocation? Attend this course to learn methods to reduce pain and have some fun while doing it.

Focused Ortho 2012: What You "Knee'd" to Know

MO-42 / 1 Hour

Faculty: Scott C. Sherman, MD

Monday, October 8 / 3:00 PM - 3:50 PM

ACEP initiates its inaugural year of a focused orthopedic session, this year dedicated to the knee. This rotating series of lectures of varying body locations focuses on physical examination techniques, soft tissue injuries, and fractures. Not only acute identification and management, but looking for potential long-term complications you must pick up in order to prevent pain and suffering. You will leave this session feeling comfortable with the diagnosis and management of any acute knee pathology.

The High-Risk Hand

MO-57 / 1 Hour

Faculty: James A. Webley, MD, FACEP

Monday, October 8 / 4:00 PM - 4:50 PM

Hand problems can be particularly challenging for emergency physicians. Failure to recognize and appropriately treat these injuries and infections can result in major disability and long-term complications. The speaker will describe the diagnosis and appropriate management of hand injuries, including tendon and nerve injuries, carpal instability, and uncommon fractures and dislocations. The speaker also will discuss the evaluation and treatment of wounds at high-risk for infection.

High-Risk Orthopedic Injuries

TU-78 / 1 Hour

Faculty: Andrew D. Perron, MD, FACEP

Tuesday, October 9 / 8:00 AM - 8:50 AM

Certain orthopedic conditions and injuries require immediate recognition or attention because of their significance for other injuries. These injuries and conditions carry significant morbidity and risk to the patient and practitioner if not immediately recognized and treated. These conditions include hip and knee dislocations, compartment syndrome, supracondylar fractures, and sternoclavicular dislocations. The speaker will review these orthopedic conditions and how to treat them.

Management of Difficult Dislocations

TU-95 / 1 Hour

Faculty: Gregory W. Hendey, MD, FACEP

Tuesday, October 9 / 9:00 AM - 9:50 AM

Have you ever encountered a patient with a dislocated shoulder you could not reduce? How about the hip that seems locked and can't seem to get back in? What about mandibular dislocations? Some reductions are just difficult. The speaker will review cases on difficult dislocations and give tips to treat them more effectively.

Master Clinician Series: The Rapid, High-Yield Ortho Exam in the ED

WE-187 / 1 Hour

Faculty: Daniel C. Garza, MD

Wednesday, October 10 / 9:00 AM - 9:50 AM

Patients with orthopedic injuries frequently present to the ED. The speaker will describe the "rapid, high-yield" orthopedic examination and "tricks of the trade" used by master clinicians. What are common errors on the physical examination to be avoided? What should I document in my note? What does the orthopedic surgeon want to hear on the phone? What are the most important aspects in timing the follow-up? The speaker will focus on the shoulder, elbow, wrist, knee, ankle, and foot.

Master Clinician Series: Orthopedic Skills Workshop

WE-252 / 2 hours

Faculty: Daniel C. Garza, MD

Wednesday, October 10 / 4:00 PM - 6:00 PM

During this hands-on workshop, faculty will demonstrate the "expert" emergency orthopedic physical examination, and review key orthopedic joint injection and reduction techniques. The instructors will focus on pearls, pitfalls, and avoidable errors. (*This course is limited to 50 participants.*)

Orthopedic Pearls and Pitfalls

MO-71 / 1 Hour

Faculty: Gregory W. Hendey, MD, FACEP

Monday, October 8 / 5:00 PM - 6:00 PM

Many ED visits present with orthopedic injuries. The speaker will describe the mechanisms of injury and the recognition of pertinent physical findings in the diagnosis of subtle orthopedic injuries that, if missed, may result in long-term problems. Common errors in the early management of several injuries will be identified and the appropriate treatment outlined. Learn the "pearls" that will help you save time, decrease frustration, and avoid poor patient outcomes.

Weekday and Weekend Warriors: Diagnosis and Treatment of Sports Injuries in the ED

TU-110 / 1 Hour

Faculty: Daniel C. Garza, MD

Tuesday, October 9 / 10:00 AM - 10:50 AM

ED visits for recreational athletes of all ages are common. Children playing football, soccer, or competing in gymnastics may suffer different injuries than high school or college athletes. What about the weekend warrior? The speaker will review common injuries in each age group as well as uncommon occurrences such as syncope and sudden death in the seemingly healthy athlete.

What's Afoot?: Five Foul Foot Fractures

MO-38 / 1 Hour

Faculty: James A. Webley, MD, FACEP

Monday, October 8 / 1:30 PM - 2:20 PM

Foot injuries may appear innocuous but an occasional bad result lurks among the myriad of good outcomes. Don't fall into the trap of missing devastating diagnoses by not recognizing important nuances of clinical and diagnostic acumen. Join the speaker as he intertwines experience and insight into foot problems that can fool the unwary physician. Gain important knowledge of the potential pitfalls in the best way to optimize patient care.
