

## Emergency Care Quality Measure Consortium

ECQMC is an industry-leading coalition founded by ACEP in 2019.

### Vision

The goal of the Emergency Care Quality Measure Consortium (ECQMC) is to improve the quality, safety, and transparency of emergency care by ensuring the development of meaningful measures that will improve patient outcomes and reduce costs. Further, by promoting quality measure alignment across emergency medicine, ECQMC will help reduce the burden of measurement and will improve the efficiency of measure development and maintenance.

### Why join ECQMC?

Emergency medicine (EM) is underrepresented within quality measurement, as there are currently only a few measures that are truly meaningful for EM clinicians. Each year that short list of existing EM measures gets even shorter, as measures are “topped out” and eliminated. There is most definitely an urgent need to develop new meaningful EM measures, and ECQMC represents a great opportunity to take the driver’s seat in that effort. By becoming a member of ECQMC, you can drive new measure creation in the areas that matter the most to EM. **Membership offers all EM groups and stakeholders an equal space to leverage EM data, improve equity, measure alignment and close important quality care gaps.**

### 3 Primary Drivers for building meaningful EM measures:

1. Transition to Value-Based Programs
2. Establish EM Quality Benchmarks
3. Build and Disseminate Best Practices

### Annual Membership Fee per organization: \$5,000
