ADVANCING EMERGENCY CARE 

POLICY STATEMENT

Approved April 2016

Fair Payment for Emergency Department Services

Revised April 2016

Originally approved
April 2009

Emergency physicians provide emergency medical services without regard for the patient's insurance status or ability to pay, consistent with our mission and EMTALA obligations. Emergency physicians face unique financial challenges in meeting this mission. Emergency physicians play an important role in the health care safety net and continue to provide essential health care services to a disproportionate share of the remaining uninsured and under-insured population in the United States. Fair payment for emergency care services, whether government funded, commercially insured, and/or paid by the patient must be sufficient to preserve the nation's fragile emergency care safety net, and ensure that patients have continued access to all qualified emergency care providers.
