

American College of
Emergency Physicians®

ADVANCING EMERGENCY CARE 

POLICY STATEMENT

Approved January 2019

Patient Information Systems

Revised January 2019 with current title, February 2013, January 2006, June 1999 titled, "Patient Medical Condition Identification Systems"

Originally approved October 1976 titled "Patient Identification Systems"

The American College of Emergency Physicians (ACEP), understanding the importance of having accurate patient information when providing medical care, supports the development and use of systems that provide appropriate, easily accessible and readily available patient information to a patient's health care providers. Such systems include, but are not limited to, electronic medical records, medical alert badges, bracelets, wallet cards, portable electronic devices, medication databases, and health information exchanges. ACEP recognizes the patient's right to confidential treatment of such information, including adherence to Health Insurance Portability and Accountability Act (HIPAA) requirements.
