

Recommend **AFib 2gether™** to help improve the shared decision-making discussion with your nonvalvular atrial fibrillation (NVAF) patients

AFib 2gether™ helps foster informed discussions between you and your patients about their individual risk factors for stroke due to NVAF by:

Prompting patients to fill out a brief Stroke Risk Questionnaire so you can facilitate a discussion regarding their stroke risk due to NVAF. The results can then be shared with you as a PDF that outlines the patient's individual risk factors for stroke and calculates their CHA₂DS₂-VASc score

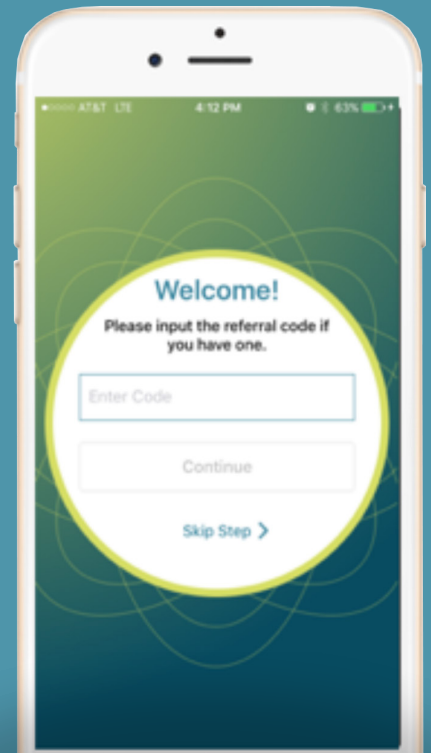

Educating patients about NVAF and their risk for stroke with facts, videos, links to inspirational and informative websites, and resources from trusted organizations

Encouraging patients to follow up regarding their stroke risk due to NVAF

Your organization can customize the **AFib 2gether™** mobile app by creating a home screen that includes your organization's logo and a welcome message for patients.

AFib=atrial fibrillation.

How to get your patients started on **AFib 2gether™** today

AFib 2gether™ is available for use on iPads in an office setting and for patients to download on their iPhone or Android smartphones. To get your patients started, provide them with a preloaded office iPad or have them:

- 1** Download the AFib 2gether™ app from the App Store (Apple devices) or Google Play (Android devices).
- 2** When prompted after download on phone, enter referral code <xxxxx>. Please note that no code is needed for office kiosk mode on iPads.
- 3** Have patients complete the in-app Stroke Risk Questionnaire and prioritize questions for a shared decision-making discussion.
- 4** Speak to patients about their responses to help facilitate an informed conversation about their risk of stroke due to AFib.
