The Death Rash: Lethal Rashes You Can't Miss

10/26/2021 | 8:00:00 AM - 8:20:00 AM

Faculty: Andrea Fang, MD

Is this just another rash presenting to your ED? The speaker will discuss visual cues to help you determine whether you are dealing with a benign or deadly rash.

- Differentiate a benign versus critical dermatologic eruption.
- Explain how to treat a deadly rash.
- Explain how to manage the benign rashes.

Dermatologic Disorders

Classic Pediatric Rashes

10/26/2021 | 12:30:00 PM - 12:50:00 PM

Faculty: Andrea Fang, MD

Do children with rashes still stump you? The speaker will review pediatric rashes, from classic childhood exanthemas to unusual & life-threatening cutaneous disorders. Using a case-based format, measles, varicella, roseola, Kawasaki's disease, impetigo, & staphylococcal scalded skin syndrome will be discussed.

- Review the common & not so common pediatric exanthems.
- Differentiate among benign & life-threatening pediatric rashes.
- Discuss the various treatment choices for these conditions.

Recognizing the Top Ten Pediatric & Adult Rashes

10/26/2021 | 4:30:00 PM - 5:20:00 PM

Faculty: Alisa A. McQueen, MD, FACEP

What is it, & what can I do about it? This is what emergency care providers really want to know when faced with a patient who has a rash. The speaker will describe how to recognize ten common & clinically significant rashes as well as mimics. The appropriate management & disposition of each rash will be discussed.

- Describe the most common clinically significant pediatric & adult rashes.
- Identify these rashes by their presentation.
- Differentiate among clinically significant rashes that have similar presentations.

Dermatologic Disorders

Abscess Management: Incise Smarter

10/27/2021 | 9:00:00 AM - 9:20:00 AM

Faculty: Gil Z. Shlamowitz, MD, FACEP

Cutaneous abscesses are common & we are all familiar with the management, but there are still clinical questions that can perplex us. Which abscesses benefit from antibiotics? Which abscesses need to have packing placed? Is there a better way to drain an abscess such as with loop placement? Does ultrasound play a role? The presenter will explore this common condition & ensure we provide the best care for our patients with cutaneous abscesses.

- Discuss diagnostic adjuncts to help identify drainable abscesses.
- Identify which interventions really improve patient outcomes.
- Review novel drainage techniques such as loops & using ultrasound.
- Highlight the patients that will benefit from antibiotic treatment in conjunction with drainage, including pediatric patients.

Basics in Burn Management

10/27/2021 | 9:30:00 AM - 9:50:00 AM

Faculty: Jacob Hennings, MD

Managing burns, whether minor or severe can be challenging. Over the years burn management has evolved. Silvadene & the Parkland Formula are no longer the answer for everyone. The presenter will explore the current, evidence-based approach to burn wound management & will ensure we are all able to provide excellent care for these patients whom don't require transfer to specialty centers.

- Discuss the management of minor burns & the proper outpatient treatment.
- Discuss how to resuscitate the sick & severe burned patient
- Identify pitfalls in the care of the burn patient

Dermatologic Disorders

Does It Itch? Tricks of the Trade from Eczema to Scabies

10/27/2021 | 1:00:00 PM - 1:20:00 PM

Faculty: Zack Repanshek

Dermatologic disorders are part of the fabric of ED practice - whether the presenting problem or an incidental finding. Come join us for a visual journey through common dermatologic conditions encountered in the emergency care setting, with management pearls & avoidable pitfalls in dermatology practice.

- Identify common rashes encountered in the ED.
- Discuss commonly used dermatology medications.
- Review pearls regarding rash management.

Wound Care: What's New & What's Best?

10/27/2021 | 4:00:00 PM - 4:20:00 PM

Faculty: Gil Z. Shlamovitz, MD, FACEP

Patients come into the emergency department with wounds of many types, big and small. Should I use water or do I need saline? Should I leave it open or close it? Should I put on a dressing or leave it open to air? This lecture will cover best practices in wound care in the emergency department.

- Review best practices for wound cleansing when patients have a contaminated wound.
- Discuss best practices for wound closure, when is it needed and what type of closure is required.
- Discuss new technology for wound dressings and what types of wound benefit from use.

Dermatologic Disorders

Botched Botox & Bad Fillers

10/27/2021 | 5:00:00 PM - 5:20:00 PM

Faculty: Jacob Hennings, MD

More and more people are undergoing office based skin treatments from Botox to fillers. What about when these procedures go wrong and patients end up in your emergency department? This course will cover early and late complications of dermatologic injectable treatments.

- Discuss the various types of fillers and injectable treatments currently approved in the US.
- Discuss potential "off label" or "under the table" cosmetic treatments you may encounter in patients presenting to the emergency department.
- Identify early and late complications such as arterial occlusion, early onset nodules, inflammatory reactions, infection, late onset nodules.
- Identify which fillers are reversible by enzymes and require consultation or referral for further management.

Dermatologic Disorders

Rashes to Know in the Anti-vax Population

10/28/2021 | 8:30:00 AM - 8:50:00 AM

Faculty: Prianka Kandhal, MD

Rashes in the pediatric patient are common, but for the un-vaccinated population the differential can be daunting. Attend this course to learn what important dermatologic presentations of systemic illnesses need to be considered & how to manage them in the patients who have not been vaccinated.

- Describe common & important rashes acquired by unvaccinated children.
- Discuss how to manage rashes found in unvaccinated children.
- Discuss how vaccination can prevent long term complications from certain illnesses.

Dermatologic Disorders

COVID Toes or Something Else? How to Assess Rashes in the Traveler

10/27/2021 | 4:30:00 PM - 4:50:00 PM

Faculty: Emily A. Rose, MD, FACEP

There are thousands of flights arriving daily from around the world to various cities in the US & hitchhiking along with the people on these flights can also be significant illnesses, including COVID19. The presenter will address how to identify & manage some of the various illnesses that may arrive in your ED with rashes acquired from around the world.

- Identify common rashes acquired abroad and how to treat them.
- Discuss how to identify cutaneous findings of illnesses potentially contracted in the traveler in the US and how to treat them.
- Discuss cutaneous findings associated with COVID19 infection.
