Metabolic & Endocrine Disorders

- **Acid Base That Actually Matters: A Case-Based Approach**  
  *Faculty: Christopher Hahn, MD*
  
  Acid-base rules are easily mastered, but when does pH really matter? During this interactive “choose your own adventure” discussion, the speaker will lead you down the rabbit hole of hydrogen ions into an emergency wonderland where pH status actually makes a difference. Utilizing patient cases from toxicology, metabolic disorders, trauma, & other emergencies, the speaker will guide you & your patient safely beyond the Henderson Hasselbalch equation by providing a common sense approach to acid base emergencies that actually matter.
  
  - Define the pathophysiology of acid base disorders utilizing the clinically relevant strong ion approach.
  - Explain an effective strategy for rapid diagnosis utilizing clinical presentation, traditional blood tests, & other techniques.
  - Outline lifesaving therapeutic strategies to safely treat & prevent acid base disorders.

- **Deadly Dialysis: A Review of Dialysis Complications and Their Initial Management**  
  *Faculty: Shannon L. Toohey, MD, FACEP*
  
  There are 468,000 patients on dialysis in the US and these patients commonly present to the community emergency department with complications. Understanding the common complications and treatments is essential for the emergency physician. The speaker will review the most common dialysis complications (infection, metabolic derangement, vascular access issues) and their acute treatments.
  
  - Review the most common presenting complications in dialysis patients,
  - Discuss acute treatment of dialysis complications.
  - Review the latest evidence-based practices for dialysis complications presenting to the ED.

- **Glands Gone Bad! Endocrine & Metabolic Emergencies**  
  *Faculty: Christopher Hahn, MD*
  
  “I’m weak & dizzy, I’m hot & bothered, I’m cold & have no energy.” Vague complaints often lead to extensive & expensive ED workups. While patients with metabolic disorders frequently present to the ED, most endocrine disorders present less often. The speaker will review how to recognize & treat adrenal insufficiency, hypothyroidism, thyroid storm, hyperparathyroidism, new onset diabetes mellitus, & metabolic syndrome.
  
  - Discuss the presentation, management & disposition in cases of hypothyroidism.
  - Discuss the presentation, management, & disposition in cases of thyrotoxicosis.
  - Discuss the presentation, management & disposition in cases of adrenal insufficiency.
  - Review new onset diabetes mellitus, & metabolic syndrome.
Lytes Out! Electrolytes Gone Wrong

*Faculty: Corey M. Slovis, MD, FACEP*

Electrolyte emergencies often present with subtle clinical manifestations yet may culminate in a near death experience for the patient & clinician! Six short lectures which will cover signs, symptoms, & treatment for the following electrolyte abnormalities: hyponatremia, hypernatremia, hypokalemia, hyperkalemia, hypercalcemia, & hypomagnesemia.

- Discuss presentation, management, & disposition in cases of hypo & hypernatremia.
- Discuss presentation, management, & disposition in cases of hyper & hypokalemia.
- Discuss presentation, management, & disposition in cases of hypercalcemia & hypomagnesemia.

The Magic of Magnesium

*Faculty: Amy F. Ho, MD*

Magnesium is a fascinating dose-dependent drug with many variable uses in the emergency department. The speaker will review how and when to use magnesium for atrial fibrillation and tachydysrhythmias, migraines, preeclampsia, torsades, reactive airway disease, and electrolyte disorders.

- Describe the doses and routes of magnesium for different clinical indications.
- Explain clinical use of magnesium for different indications as to when the consider magnesium.
- Describe the lab evaluation of hypo and hypermagnesium and discuss safe repletion.
