

AHRQ R18 Learning Collaborative

Opportunity to Improve Care for Individuals with Sickle Cell Disease in Your Emergency Department

..... **JA credit will be offered**

Duke University School of Nursing will be hosting a learning collaborative to improve ED care for persons with sickle cell disease. This is a great learning opportunity for your emergency department to become familiar with and learn how to implement the latest evidence-based SCD recommendations in the ED. It will begin with a short patient presentation, followed by a short case-based presentation including both educational concepts and QI opportunities. We intend for this learning collaborative to be a discussion-based forum and encourage participation and questions from sites, including successes and challenges.

Who should participate?

- ED Physicians
- ED Nurses
- ED NP's and PA's
- In-patient nurses
- Case Managers
- Social workers
- Educators
- Pharmacists
- Hematologists and sickle cell providers

Why should my ED participate?

- Opportunity for discussion-based learning, with at least two emergency medicine/sickle cell experts present on each call
- Share tools and resources
- Share evidence-based best practices
- Learn how to collect data and use it for your individualized projects
- Opportunity for quality improvement in your ED

When is the learning collaborative?

The learning collaborative will be held the 1st Wednesday of every month starting on November 7th (with the exception of January 2nd and July 3rd, 2019) from 12:00pm-1:00pm (EDT).

.....
Please email Emily at emily.bonnabeau@duke.edu if you are interested in participating.
