

Modern emergency department software for patients & providers that sits on top of your existing EHR. Our software uses artificial intelligence to predict admits hours in advance, reduce length-of-stay, and save hospitals time and money with improved flow and efficiency.

Accelerate your ED flow, predict admits, reduce LOS, and get patients to the right level of care in the ED.

Use Vital to more accurately assign ESI levels, predict 30 day re-admissions, and maximize hospital resources.

Cost Savings

Reduce length of stay by hours, save valuable RVU's, and increase reimbursements with better documentation.

Gain Efficiency

Fast track your patients faster, see more patients per hour, spend less time in your EHR.

AI Predictions

Know your admits instantly, more accurate ESI levels, and predict 30 day re-admissions.
